

Towards Ubiquitous Government: The Case of Finland¹

Ari-Veikko Anttiroiko, University of Tampere

ABSTRACT

This article outlines the concept of u-government. The objective is to analyze the key aspects of u-government development policy. The empirical section starts with a brief description of examples of u-government initiatives in different parts of the world. The last section of the article focuses on u-government initiatives and services in the Finnish public sector, which are used to exemplify the present state of development of u-government in the Nordic countries.

Keywords: ubiquity, u-government, m-government, wireless community, u-service

¹ This article is based on a presentation in the World Economic Forum, Seoul, South Korea, 12 October, 2004.
